# Try These Next-Gen Facials For Your Christmas Party Prep

BY BECKI MURRAY

10TH DECEMBER 2024

# BYONIK

## The Tweakments Guide

(Digital Publication)

### Why is an advanced facial perfect for before your Christmas party?

Many **advanced facials** can be enjoyed as 'one and done' treatments, meaning you can see certain results straight away (although the benefits can also get better overtime with a session of treatments). This makes them especially good to book in for in the run up to a big event, including your festive parties.

What's more, while advanced facials are known for being thorough in their approach, they are also designed to keep downtime to a minimum – with some offering treatments where you can confidently head straight to a social occasion post-session. That's why if you want to solve an annoying skin concern, including dull, tired-looking skin before your Christmas party, you can trust them to deliver skin-boosting results super quickly.

### Our favourite advanced facials:

#### FOR INFLAMED SKIN: BYONIK

**BYONIK** is a laser-based facial with a real point of difference. Unlike traditional heat-based lasers, it uses a Pulse Triggered Laser (PTL), which non-invasively delivers 'cold' low-level laser energy into your skin at time intervals adjusted for maximum cellular response. This is paired with a deep cleanse, an enzyme peel, and the application of hyaluronic acid gel, for a treatment that encourages skin repair and targets lines, enlarged pores and uneven tone. The best news: one treatment is enough to start seeing results, and it can even be used on inflamed skin, including active acne.

Want your skin to look its very best this Christmas and beyond? Why not **book a consultation** with our skincare specialist **Shenaz** to get the advice and **20% off her product recommendations**.

### WHY WE RECOMMEND BYONIK

BYONIK achieves impressive results on highly-compromised, inflamed skin – and there's not usually all that much you can do in the way of devices if your skin is in that sort of state. It's unique because it doesn't rely on thermal or mechanical injury for a wound-healing response and skin improvement, again, making it suitable for angry or upset skin. Instead, BYONIK is completely non-invasive and non-traumatic to the skin and doesn't even leave any redness.
